Title : Poisonous and Harmful Plant of Summer Pastures in
the Shushinskiy Rayon

Orig Pub: Uch. Zap. Kirovabadsk. ped. in-t, 1956, No 4,
157-150

Abstract: Poisonous plants and plants unsuitable for cattle
grazing in the pastures of the Shushinskiy Rayon,
Azerbaijan SSR are enumerated. They have emerged
as a result of long, haphazard cattle pasturage
and the overloading of pastures.

AUTHOR: Kuliyev, V. Sh.

TITLE: Use of herbicides in winter pastures of Azerbaidzhan

SOURCE: AN AzerbSSR. Doklady, v. 21, no. 5, 1965, 82-84

TOPIC TAGS: agriculture, weed killer, plant injury

ABSTRACT: Since March 1962 various herbicides including atrazin, simazin, and 2,4-D have been used experimentally to kill some 75 weeds and toxic plants in the winter pastures of Azerbaidzhan. Results show that atrazin and simazin (3 kg/hectare) completely kill off weeds and toxic plants as well as many grasses in 16 to 18 days, but the following year nothing, neither grass nor weed, grows on the treated area. With 2,4-D treatment weeds, toxic plants, and many grasses are also completely killed off in 16 to 18 days the first year, but growth of grasses in the treated area is not affected the following years. Herbicide 2,4-D vastly improves winter pastures by killing off weeds and toxic plants and stimulates growth of the most valuable feed grasses. The use of 2,4-D in early spring reduces

Card 1/2

L 2017-66

ACCESSION NR: AP5022086

weeds and toxic plants by 80 to 90%, prevents their seeding, and increases feed productivity of grasses by three times or more. The demonstrated feasibility of improving winter pastures with herbicides points to the need for continued herbicide research and development. Orig. art. has: 1 table. 3

TITLE: Use of digital computers for computing transition processes in electrical circuits with distributed parameters (Presented by academician Ch. M. Dzhubarly* of the Academy of Sciences, Azerbaydzhan SSR)

SOURCE: AN AzerbSSR. Doklady*, v. 19, no. 11, 1963, 15-18

TOPIC TAGS: digital computer, transition process, distributed parameters, automatic control, impulse system, discrete Laplace transform, transfer function, recursion relation, impulse characteristic

ABSTRACT: The author considers the use of a numerical method proposed by Professor Ya. B. Kady*mov for computing transition processes in electrical circuits with distributed parameters in the general case, and the solution of problems on digital computers by this method. The basic advantage of this method is the availability of simpler mathematical and physical interpretations. Treatment of the processes on the basis of the theory of impulse systems and use of the discrete

Card 1/2

TITLE: Condensation of thiourea and alkylphenols with formaldehyde

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 23, 1962, 268-269,
abstract 23Zh166 (Azerb. khim. zh., no. 2, 1962, 65-69
[summary in Azerb.]

TEXT: By condensing together thiourea (I) and C_6H_4OHR (IIa - g, where (a) $R = C_3H_7$, (b) $R = C_4H_9$, (c) $R = C_5H_{11}$, (d) $R = C_6H_{13}$, (e) $R = C_7H_{15}$, (f) $R = C_8H_{17}$, (g) $R = C_{10}H_{21}$) with formaldehyde (III) substances with the general formula $CS(NHCH_2C_6H_3OHR)_2$ (IVa - g) were synthesized and their anti-corrosion and anti-oxidation properties studied. The aforesaid II were produced by alkylating phenol with the appropriate alcohols in the presence of concentrated H_2SO_4 . The addition of an alkylphenol group to the dimethylolthiourea radical was not detected, but apparently (see Ellis,

TITLE: Electrical Conductivity within the earth according to data on annual geomagnetic variations

SOURCE: Geomagnetizm i aeronomiya, v. 6, no. 2, 1966, 370-374

TOPIC TAGS: geomagnetic field, electric conductivity

ABSTRACT: Annual geomagnetic variations have been used in computing their field potential. The computations were made using the theory of electromagnetic induction in a spherically symmetrical earth. According to this model, the earth consists of a conducting core and a nonconducting mantle surrounding the core. This paper gives only the final formulas used in computing conductivity and the thickness of the nonconducting mantle. These made it possible to determine conductivity and d apparently is determined by the nonuniformity of the data used. It was found that the value d on the average is about 700 km, while the value is an average of about 4.8.10-12 emu. The author thanks Yu. D. Dalinin for directing the carrying out of this work. TITLE: Electrical conductivity inside the earth based on data of annual geomagnetic variations

SOURCE: Geomagnetizm i aeronomiya, v. 6, no. 2, 1966, 370-374

TOPIC TAGS: geomagnetic field, electromagnetic field, earth magnetic field, electric conductivity

ABSTRACT: Based on the data of the annual geomagnetic variations, the authors calculated their field potential. The calculations were performed with the use of the theory of electromagnetic induction in a spherically symmetric earth (Lamb's model). According to this model the earth consists of a conducting core and a nonconducting shell surrounding the core. The electrical conductivity and thickness of the nonconducting shell were determined. The results of the calculations showed that the thickness of the nonconducting shell averaged 700 km and the conductivity $4.8 \cdot 10^{-12}$ emu. Apparently the dispersion is due to irregularities of the initial data. In conclusion the author thanks Yu. D. Kalinin under whose supervision the study was performed. Orig. art. has: 13 formulas and 3 tables.
